SUMMARY

Full Stack Developer with 5 years of experience building and maintaining production web applications, from admin panels and data dashboards to REST API integrations and legacy systems. Currently working at Brave.ag on front-end and back-end features for an international ride-hailing and delivery platform. Previously developed data monitoring solutions for companies and research institutions in energy consumption, epidemiology, and oil well visualization. Experienced with React, Angular, Next.js, and Laravel.

TECHNICAL SKILLS

Front-end: React, Angular, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS

Back-end: PHP, Laravel

Data & integrations: REST API integration, Prisma, Supabase, React Query

Tools: Git/GitHub (branching, code reviews, merge requests), Docker, WordPress, SEO

English: Basic/intermediate; technical reading and written communication

PROFESSIONAL EXPERIENCE

Full Stack Web Developer | Brave.ag

02/2022 - Present | 99 project (international ride-hailing and delivery platform)

- Implement and maintain front-end features for the corporate website and internal dashboards, including a file manager integrated with the Amazon S3 SDK using a local MinIO instance.
- Led the migration of part of the website from WordPress to Next.js/TypeScript, including new pages, features, and admin panels, using Tailwind CSS and Contentful as the CMS.
- Develop React components for workspace and project permission management and participate in team code reviews.
- Built filtering components in Next.js with route-based conditional rendering and dynamic item counters; use React Query for time-tracking functionality.
- Maintained and troubleshoot applications using Prisma, including inconsistencies between schemas, migrations, and the production database.
- Built and maintained an Angular web application for AES My Energi to monitor energy consumption with charts and geolocation data (06/2022 - 06/2023).

Technologies: Next.js, TypeScript, Angular, Tailwind CSS, Contentful, Kendo UI, WordPress, CSS3, JavaScript, Git/GitHub

Web Developer / Research Fellow | COPPE/UFRJ

06/2025 - 06/2026

- Developed and maintained an epidemiological disease monitoring application with graphical data visualization using Chart.js.
- Integrated the INT GeoToolkit MultiWellWidget into an Angular application for oil well log visualization.
- Implemented curve color and fill controls, context menus, and template export/import functionality.

Technologies: React, Angular, CSS3, Chart.js, REST API integration

Web Developer | Instituto de Desenvolvimento de Arraial do Cabo

10/2021 - 02/2022

- Maintained the institutional website and websites of other municipal government agencies in Arraial do Cabo.

Technologies: Laravel, PHP, JavaScript, REST API integration

Freelance Web Developer | Independent Projects

06/2021 - 02/2022

- Developed and optimized sales-oriented websites with a focus on SEO and performance.

Technologies: PHP, JavaScript, CSS3, WordPress, SEO

FEATURED PROJECT

Desapet | Animal Adoption Platform

Bachelor's degree final project, Unesa | 2021

- Developed a web platform for pet donation and adoption as the final project for the Information Systems degree.
- Implemented listing creation and management, likes/favorites, listing reporting, and user authentication with middleware-based access control.
- Built a support and administration panel with a dashboard, search, and user and product management.

Technologies: Laravel, PHP, Blade, Tailwind CSS, Alpine.js, MySQL

EDUCATION

Bachelor's Degree in Information Systems | Unesa, 2015 - 2021
